YXLON FF35 CT

Multi-application, high-resolution computed tomography (CT) inspection system for fine and middelsized parts

Technology with Passion

Explore the art of detection

As a world leader in non-destructive X-ray testing, YXLON has mastered the art of detection. Based on our extensive experience in designing tailor-made X-ray and CT solutions, we help our customers achieve excellent results during their scientific research and development projects as well as production inspection procedures. Making the invisible visible – that's what we call the art of detection.

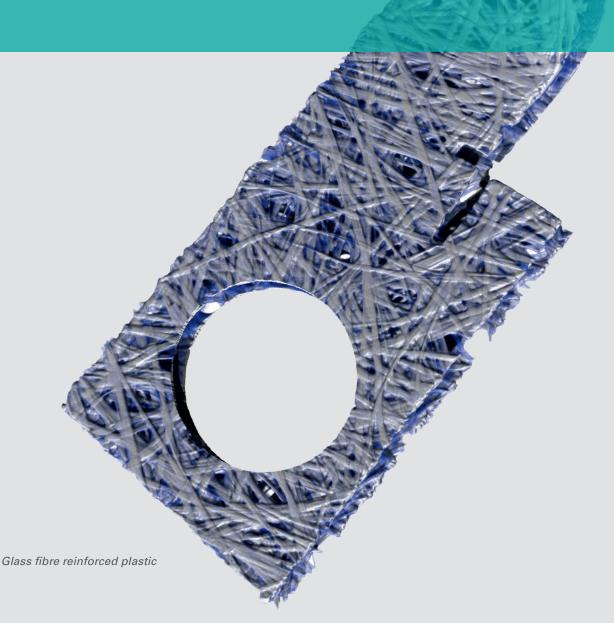

No matter what industry you're in, you'll get excellent 3D images thanks to our smart CT systems. The diversified YXLON CT portfolio covers the widest variety of sizes and materials, with the FF35 CT focusing on very small to medium-sized parts.

YXLON CT solutions are tried and tested premium systems. They blend smoothly into your processes, guaranteeing fast, intuitive workflow and high uptime. Our CT product range equips you with relevant information regarding the interior and exterior structures of your items, enabling you to do all kinds of analyses.

Additionally, the worldwide YXLON service network is an important factor to be taken into account when evaluating the YXLON CT priceperformance ratio – one that appeals to quality managers, operations personnel, and purchasers alike.

Where do you use YXLON FF35 CT?

- Research and development (R&D)
- Failure analysis (F/A)
- Process control
- Small series inspection
- Combined DR-CT inspection
- Defect and material analysis
- Assembly checks

Experience a clearly structured CT inspection workflow

Do you want to improve the material testing procedures in your R&D department? Do you want to optimize your process control and small series inspection? Discover the versatility of the FF35 CT with its touchscreen user interface, intelligent automation and great functionality.

FF 35 CT is ideal for fine parts inspection in the automotive, electronics, aviation and material science industries where most detailed results are paramount in order to comply with high safety and quality requirements.

FF35 CT supports your ability to carry out your tasks easily since it provides smart inspection processes with its newly designed Geminy graphical user interface. Use the intuitive touchscreen to easily combine 2D and 3D inspections in one sequence, and graphically create your individual imaging chain via drag and drop icons.

Various automated functions also help you save time. IntelliGuard, the automatic collision protection allows for quick and comfortable operation. The system health status for important values lets you always keep the overview of your system.

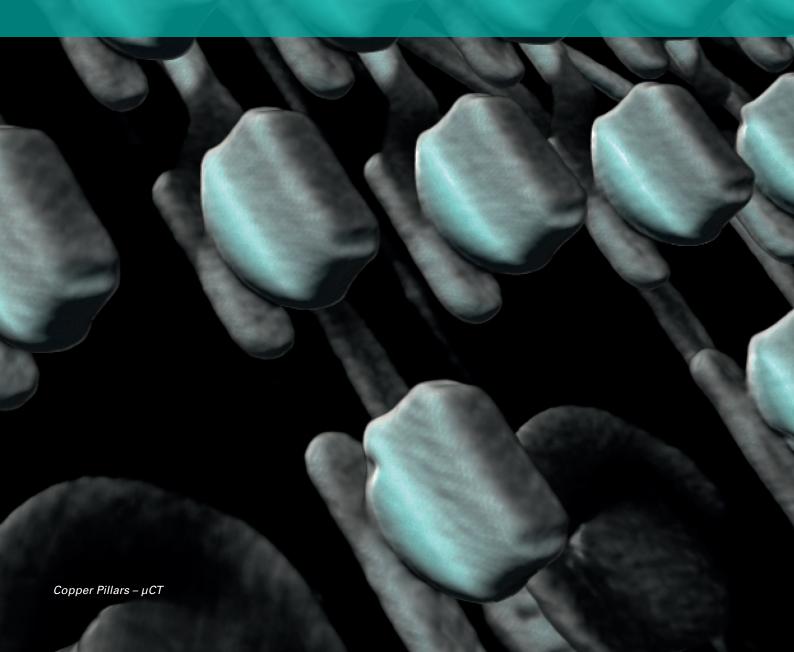

Remote monitoring with push messages is another process simplifier, since you can check the system from a distance. Plus, to efficiently manage the daily inspection schedule you can assign different user levels that range from the unskilled operator to the experienced expert.

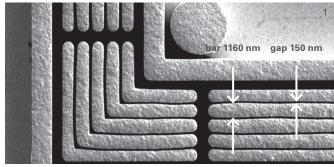

YXLON FF35 CT key benefits

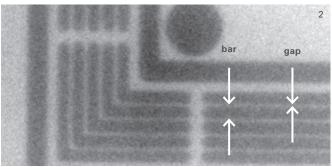

- Intuitive touchscreen operation
- Revolutionary inspection sequence creation using icons
- Flexible ROI selection thanks to virtual rotation axis
- Extensive range of applications using two tubes in one inspection sequence
- Time saving with remote monitoring including push messages
- Expanded inspection envelope with horizontal field of view extension, Helical and dual Helical CT techniques
- Increased versatility via motorized focus-detector distance

Detect what matters

Double impact. The core advantages of the powerful and versatile YXLON FF35 CT come in pairs: combined 2D and 3D inspection with touch operation, and two independent tubes which you can change with a touch of a button.

- 1 SEM (Scanning Electron Microscope) image shows the exact dimensions of the test pattern.
- 2 150 nm gap clearly visible in the X-ray image
- 3 Remote monitoring
- 4 Health monitor, consolidated view

Cover the broadest fine and middlesized parts testing range

Experience the versatile and powerful performance of FF35 CT for defect and material analyses and many more applications. A high power reflectional tube and a nanofocus transmission tube are at your disposal during a single inspection sequence. Inspect even more materials and sizes with FlexCenter which enables off-center virtual rotation axis. The horizontal field of view extension ScanExtend expands the bandwidth of parts even further.

Instead of stitching different areas of a tested object, you can use HeliExtend (YXLON helical CT) to automatically compose a single accurate image. The HeliExtend Dual, a combination of horizontal field-of-view extension and Helical CT, enables the depiction of maximum-sized parts in a 3D volume. In addition, supreme image quality is supported by

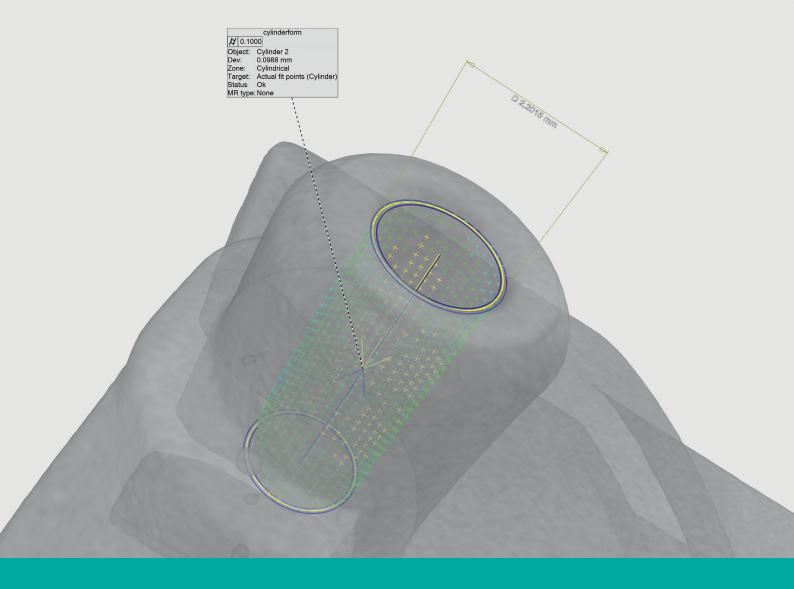

ring artifact and beam hardening correction. The motorized focus-detector distance also facilitates the premium inspection level of FF35 CT, and the new watercooled 190 kV nanofocus tube with it's extremely small focal spot provides an as yet unparalled detail detectibility down to 150 nm even at high energies (2D).

Innovative technologies and rock-solid components like the granite-based manipulator make the FF35 CT the most powerful and versatile CT system of its class

For precise positioning all manipulator axes are equipped with Heidenhain encoders. The optimum image quality can be achieved by an automated detector calibration with step wedges of different materials.

Which items and materials are especially suitable for YXLON FF35 CT?

- Electronic components like SMD
- Semiconductor packaging
- Probes of new materials (e. g. metal, plastics, CFRP)
- Microsystems, MEMS, MOEMS
- Medical devices like hollow needles
- Small metal parts such as injection molds
- Electronic devices
- Small castings

Experience Sie "The Art of CT Metrology"

Do you want a non-destructive way to geometrically measure internal and hard-to-access areas of industrial items? Do you want to use industrial CT to its full effect? Premium dimensional measurement with the YXLON FF20/35 CT Metrology systems for quality assurance (QA) saves time and money.

YXLON CT systems produce volume data which contains comprehensive geometrical information on the inspected item. This enables you to perform a wide variety of tests. An almost unlimited number of reference points can be used to measure the

complete part and you can add internal measurements for cavities and material interfaces in hybrids and assemblies.

Regarding wall thickness you can conveniently perform color-coded CAD comparisons. With archived CT data you are able to continue taking measurements without the original part, which also allows you to execute reverse engineering.

Plus, you can trace measurement data for safety regulations. The general equation is simple: The combined strengths lead to leaner processes which can in turn initiate cost savings.

Strengths of YXLON FF35 CT Metrology?

- Precise, non-destructive measuring, also of interior structures
- Measurements of minute structures
- Non-sequential fast data acquisition with almost unlimited measurement points
- Substantial time savings via seamless defect analysis and nominal/actual comparison
- Reduced correction loops
- Fewer correction costs
- Conformity to the VDE/VDI 2630 standard

Calibrated ruby sphere gauges mounted on a high precision part holder to validate the compliance of specified MPE_{sp}

The YXLON FF35 CT Metrology

The FF35 CT Metrology is ideally suited for metrology tasks. Configured with two X-ray tubes, it allows numerous components and different materials to be measured. Sharp contrast makes exact measurements possible.

A fully automated acceptance test referring to VDI/VDE 2630 sheet 1.3 requirements allows the specific maximum observational error MPE_{SD} to be verified with the calibrated YXLON specimen. The results are documented both graphically and in tabular form, while measuring capability is signalled by the traffic light system of the health monitor. The temperature regulator for the interior is also integrated in this health monitor. Deviations from the user-specific requirements are displayed so as to be visible from a distance.

An intelligent fan controller ensures regulation of the temperature, enabling appropriate reactions in focus to detector distance processes and when the loading door is opened. The water-air cooler used is offset and can, if necessary, be placed outside the measuring room in which the CT system is located. The technology employed allows the temperature range of measuring room quality class 3 defined by VDI 2627 to be achieved in the test room of the FF35 CT Metrology.

The FF35 CT Metrology offers a seamless process without further user interaction from the start of the CT scan to the macrofied measurement of inspection parts. The system supports the VGStudio MAX software with corresponding add-on packages and GOM Inspect Professional.

How you benefit from YXLON FF35 CT Metrology

- Automated acceptance test with measurement report referring to VDI/VDE 2630 sheet 1.3
- Convenient access to the history of previous acceptance test measurement reports
- Indication of readiness for measurement and compliance with the temperature specifications in the health monitor
- Intelligent fan control of temperature regulation with offset heat exchanger
- Temperature range of measuring room quality class 3
- Seamless workflow with VGStudio MAX and GOM Inspect Professional

YXLON Life Cycle Service – more than the best image

YXLON Life Cycle Service

- Y.ServicePass the most important services tailored to your system and your needs
- Y.SmartPass for customers who need instantaneous spare parts availabilty
- Y.LifeCyclePass the all-inclusive package covering all costs throughout the entire system lifetime
- Y.WarrantyPass predictable costs by extending the warranty for one or two years
- Y.SmartSpares the best compatibility and added functionality using original YXLON spare parts
- Y.Exchange direct replacement of defective or worn-out components to minimize system downtimes
- Y.Upgrades up-to-date system technology and prolonged lifetime
- Y.Academy professional training teaches your operators how to get the most out of the system

What are your specific service requirements? We offer a wide range of service modules and packages tailored to your needs.

Our highly qualified global service team is committed to providing excellent service to our customers worldwide. With eight global service centers and specialized staff at over 50 service partners, we can ensure a rapid response time wherever and whenever you need it.

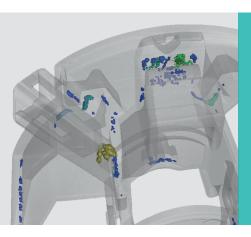

Your benefits include:

- High system availability
- Low operating costs
- Superior inspection results
- Guaranteed operational safety
- Prolonged system lifetime

We align our organization and all service activities to comply with your requirements. With our innovative, modular service solutions you can count on true added value throughout the entire life cycle of your system.

We support you in keeping your inspection costs to a minimum. At the same time, your systems operate safely at peak performance while providing optimum inspection results throughout their entire lifetime.

Would you like to learn more about our systems? Interested in a test inspection?
Please contact us by phone or e-mail.
We look forward to hearing from you.
